Figure 5 – Wireless Network Connection

7. Click on **Change advanced settings** under **Related Tasks**.
The Wireless Network Connection Properties window appears.

8. From the Wireless Networks tab, click on KSU under Preferred Networks.
9. Click on the **Properties** button. The **KSU properties** window appears.

10. From the **Association** tab, ensure that **Network Authentication** is set to **WPA2** and **Data Encryption** to **AES**.

11. From the **Authentication** tab, set the **EAP type** to **Protected EAP (PEAP)**.

12. Uncheck **Authenticate as computer when computer information is available**.
13. Click on the **Properties** button.

The **Protected EAP Properties** window appears.

14. Uncheck **Validate server certificate**.
15. Uncheck **Enable Fast Reconnect** *(See Figure 11)*.

16. Under **Select Authentication Method**, click on the **Configure...** button.

The **EAP MSCHAPv2 Properties** window appears.

17. Uncheck **Automatically use my Windows logon name and password (and domain if any)**.

18. Click on **OK** on each open window until you return to the **Network Connections** window.

19. Click on **view available wireless networks**. *(See Figure 4)*

20. Double-click on **KSU** to connect to the KSU wireless network. *(See Figure 5)*
A **Wireless Network Connection** pop-up appears from the taskbar.

21. Click on the pop-up.

The **Enter Credentials** window appears.

22. Enter your **NetID** and **NetID password**. Leave the Logon domain field blank.

23. You are now connected to the KSU wireless network.
